

Mr. Keith Gerber

This is a belated thank you for the neat things that Hoosier Pattern provided to me and the Machinist Group of Northeast Indiana INC during the summer. First of all, Mr. Greg Gage led the MGNI on a tour of your plant. We were impressed with the facility for a variety of reasons. The efficient design and blending of old and new technology was well done. The pride that all of your employees exhibited indicated that you and your team have thoughtfully not only designed an efficient building, but an environment in which your personnel thrive. Finally, I personally enjoyed the entry to the office area and its mini- museum of old technology as I am an old codger and worry that technology will erase the value of the skilled craftspeople on whose shoulders we have stood to reach the techniques used in manufacturing today.

Another thank you I wish to highlight is for the Hoosier Pattern Pour which I participated in. The whole event was carefully planned and educational for all individuals who participated. I know that this first rate event required planning time and significant financial outlay on the part of Hoosier Pattern.

Finally, I wish to thank you for casting of the 24 miniature anvils cast at the Pour for the membership of the MGNI.

In conclusion, It was a joy to see your people so proud of what your company is doing and the loyalty they expressed.

Blessings and continued growth and success to all involved.
